BEFORE

Housing Cloud

An operating system for residential student life

<https://housing.cloud/>

Summary

Housing.Cloud is building an Operating System for Residential Life that helps universities maximize profitability, efficiency, and student satisfaction

Student Housing is the center of on-campus Residential Life and offers entry into other well-funded university departments that are underserved by outdated, over-priced, and unstable software.

We help universities:

- Attract more students to live on campus** with student-friendly tech and tools
- Optimize occupancy** with AI-based scenario planning
- Simplify operations** across housing programming, and student staffing

Improve alumni giving by elevating student satisfaction with ideal roommate matches, incredible campus programming, and increased student engagement.

- Students who are more satisfied with their residential experience are likely to donate more to their alma mater than those who are less satisfied.¹

Industry

Student Housing is big business, with 2,500 U.S. schools generating over \$48B in housing revenue from 8.5M students

 <p>\$276B²</p> <p>U.S. Higher Ed. Revenue from Tuition</p>	 <p>\$48B¹</p> <p>U.S. Higher Ed. Revenue from On-Campus Housing</p>	 <p>\$5,650</p> <p>Average per Student Bed</p>

Why Now?

Schools must boost housing revenue and student engagement despite a difficult market and strong private competitors

- Housing still down vs. pre-Covid**
And many returning students are under-socialized and unprepared for campus life
- Off-campus competition is up**
\$10.6B has been invested into off-campus housing in 2022
- An "enrollment cliff" is looming**
As 2025 incoming freshmen will drop by 15%
- Sticky market up for grabs**
#1 player StarRez has acquired #2 and #3 and is shutting them down by 2025. Many schools are shopping for a solution

Enrollment Projected to Drop Sharply After 2025
Forecasted number of college-going students in the US (millions) by year of high school graduation

StarRez

Problem

Meanwhile, schools are overpaying for software that is outdated, unreliable, and difficult to use or train on

- Most student portals are outdated**
and unattractive to today's college students who are used to the latest in technology
- Admin software is inflexible**
on contemporary data like gender identity or preferred name as well as in handling special accommodations like emotional support animals
- Even the major players crawl or crash**
under moderate usage loads

Solution

Housing.Cloud helps schools maximize student satisfaction with their on-campus living experience while simplifying operations

- Stable + Scalable**
Cloud infrastructure capable of handling massive visitor load
- Usable**
Intuitive design reduces staff training and school onboarding timelines
- Customizable**
Adaptable to each school's unique housing programs
- Expandible**
Dozens of add-on modules simplify and empower adjacent functions

ROI

- \$70,000**
Cost saving and lost time value for an average school with 1500 beds on-campus
- \$1.2 million**
Potential revenue increase at the same school using Occupancy Manager to maximize room configuration profitability

Why We Win

HousingCloud is launching into a sticky, underserved market primed for revolution with software that's already vastly superior to the largest competitor

Product and ACV Waterfall (1/2)

Housing management SaaS generates high ACVs, which will grow significantly with additional "residential life" and planning modules

Product and ACV Waterfall (2/2)

Our MVP increases student satisfaction and empowers schools to manage their own processes with no-code, DIY tools

A manual roommate matching process for 1,000 students could take a school over five business days. With HousingCloud, it takes MINUTES.

Competitive Landscape

Consolidation under an outdated provider presents an unprecedented market opportunity as schools look for new software

	HousingCloud	StarRez	iteRezLife
Ease of use	🟢	🟡	🔴
Doesn't crash or crawl	🟢	🟡	🔴
Easier client integration	🟢	🟡	🔴
AI-based roommate matching	🟢	🟡	🔴
No code reporting	🟢	🟡	🔴
Sleek student interface	🟢	🟡	🔴

StarRez bought two major industry competitors in 2022, Adirondack and Mercury.

Both are being absorbed into StarRez for a combined 3M+ beds across the US.

Traction

We have launched our initial MVP and are pursuing a weighted sales pipeline of over \$1.1M

Business Model

We generate revenue through a vertical SaaS licensing model with sticky recurring revenue streams + massive Lifetime Value

Current Revenue Model	Future Model
<p>One-time setup fee (~\$5 - 10K)</p> <p>Annual upfront payment (~\$8.5K - \$55K)</p> <ul style="list-style-type: none"> License and setup fees are dependent on number of active students. Schools only leave integrated providers when they are either dissatisfied or when there are industry inflection points (like with StarRez). Onboarding a school creates a sticky revenue stream. 	<p>Enhanced setup fees (~\$10K - \$25K)</p> <p>with annual upfront payments (\$12K - \$100K)</p> <p>Optional expansion module fees (~\$5K - \$50K)</p> <ul style="list-style-type: none"> Referral fees (renter's insurance, moving service, et al.) Fintech revenue

Addressable Market

Cutting-edge student housing workflow software is the wedge into a \$1B+ "residential life" market

Financial Projections

Our revenues will increase at over 500% in Year 2 and 73% in Year 3 as we build out additional modules and sign-up schools

Team

Our team combines a wealth of start-up experience with big tech know-how in companies such as Meta, IBM, and Microsoft

Geoff Bartakovics
CEO

- Former partner, real estate start-up
- Second-time founder (company acquired)
- Fulbright scholar
- University of Chicago, BA

Sasha Bratyskin
CTO

- Former Senior Engineer, Meta
- Third-time founder (blockchain-based social network and healthcare SaaS startup at IBM)
- McGill University, BA, Software Engineering
